

REMARKS/ARGUMENTS

Favorable reconsideration of this application as presently amended and in light of the following discussion is respectfully requested.

Claims 17-19, 28, 35, 36, and 58-61 were pending. Claim 60 has been cancelled: Claims 17, 28, and 36 have been amended; and Claims 62-67 have been added by this amendment. No new matter has been added.

In the outstanding Office Action, Claims 17, 19, 35, and 58-61 were rejected under 35 USC 103(a) as being unpatentable over Takagi in view of Dixon; Claim 28 and 36 were rejected under 35 USC 103(a) as being unpatentable over Takagi and Dixon and further in view of Hawkins; Claim 18 was rejected under 35 USC 103(a) as being unpatentable over Takagi and Dixon and further in view of Lee.

Applicants will first discuss amended independent Claim 17. Support for the amendment to that claim may be found in previously presented Claim 19.

Turning now to the references cited in the rejection of Claim 17, is it respectfully submitted that Takagi does not disclose an LED that “has a plurality of light-emitting diodes matrix-arranged in a plan,” as recited in amended independent Claim 17. In addition, although Takagi describes a configuration of a pivotable movement for the core of a hinge axis, there is no description as to a configuration of a rotation about a direction perpendicular to the core of a hinge axis as an axis. Clearly, therefore Takagi fails to disclose “said display-side casing is configured to be rotatable by at least 180° about a direction perpendicular to the core of a hinge axis as an axis.”

Dixon shows in Fig. 3 six different stacks of dots. However, since each stack of dots has a different number of dots, is it respectfully submitted that these stacks of dots cannot be considered as a matrix arrangement. Further, is it respectfully submitted that Dixon does not describe at all that the casings are pivotable.

To sum up, is it respectfully submitted that Takagi and Dixon fail to disclose the configurations recited in amended independent Claim 17, that is, “an LED display panel matrix-arranged in a plane” and “said display-side casing is configured to be rotatable by at least 180° about a direction perpendicular to the core of a hinge axis as an axis.” Thus, it is respectfully submitted that these configurations would not have been obvious even from the combination of Takagi and Dixon.

Applicants will now discuss amended, newly independent Claim 28.

Turning now to the references cited in the rejection of Claim 28, is it respectfully submitted that Takagi does not disclose an LED that “has a plurality of light-emitting diodes matrix-arranged in a plane”, as recited in amended newly independent Claim 28. In addition, is it respectfully submitted that Takagi does not describe an operation key operable in a state that casings are in their close position, either. Clearly, therefore Takagi fails to disclose “the main control unit switches display contents of the LED display panel by operation of said operation key.”

Dixon shows in Fig. 3 six different stacks of dots. However, since each stack of dots has a different number of dots, is it respectfully submitted that the stacks of dots cannot be consider as a matrix arrangement. Further, since Dixon does not describe that the casings are pivotable, is it respectfully submitted that there is, as a matter of course, no description regarding an operation key operable in a state that casings are in their closed position.

To sum up, is it respectfully submitted that Takagi and Dixon fail to disclose the configurations recited in amended, newly independent Claim 28, that is, “an LED display panel matrix-arranged in a plane”, “an operation key operable in a state that the operation-side casing and the display-side casing are in their closed position,” and “the main control unit switches display contents of the LED display panel by operation of said operation key”. Thus, it is respectfully submitted that these configurations would not have been obvious even

from the combination of Takagi and Dixon.

Applicants will now discuss amended, newly independent Claim 36.

Turning now to the references cited in the rejection of Claim 36, is it respectfully submitted that Takagi does not disclose an LED that “has a plurality of light-emitting diodes matrix-arranged in a plane”, as recited in amended, newly independent Claim 36. In addition, is it respectfully submitted that Takagi does not describe an operation key operable in a state that casings are in their closed position, either. Clearly, therefore Takagi fails to disclose “display of said LED display panel turns on/off by operation of said operation key”.

Dixon shows in Fig. 3 six different stacks of dots. However, since each stack of dots has the different number of dots, is it respectfully submitted that these stacks of dots cannot be considered as a matrix-arrangement. Further, since Dixon does not describe that the casings are pivotable, is it respectfully submitted that there is, as a matter of course, no description of an operation key operable in a state that casings are in their closed position.

To sum up, is it respectfully submitted that Takagi and Dixon fail to disclose the configurations recited in amended, newly independent Claim 36, that is, “an LED display panel matrix-arranged in a plane”, “an operation key operable in a state that the operation-side casing and the display-side casing are in their closed position” and “display of said LED display panel turns on/off by operation of said operation key”. Thus, it is respectfully submitted that these configurations would not have been obvious even from the combination of Takagi and Dixon.

Application No. 10/574,970  
Reply to Office Action of August 28, 2008

An early and favorable action on this application is respectfully requested.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,  
MAIER & NEUSTADT, P.C.
